Innovative because...

It is an interdisciplinary program that equips students with the skills to analyze, understand and articulate the complexities and interdependencies of today's global challenges.

Exemplary because...

students explore how global challenges impact local contexts, uncover root causes of inequality, conflict, and ecological change, critically evaluate policy interventions, and discuss possible pathways toward sustainable futures.

Idea

"Global Futures: Development, Sustainability, Social Justice" is a joint MA program in Social Anthropology and Geography, with contributions from Area Studies and other relevant disciplines. It offers training in qualitative methods with options to integrate quantitative approaches and Geographical Information Systems (GIS).

Success factors

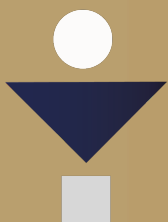

1. Fostering critical dialogue about today's global challenges
2. Advancing research for sustainable and just futures
3. Building partnerships with universities across the Global South
4. Facilitating connections with the humanitarian and development sector

Goals

1. Analyze global challenges through an interdisciplinary lens based on theoretically and empirically informed research.
2. Reflect on the theoretical, practical, and ethical dimensions of global politics, humanitarianism, development, and responses to ecological change.
3. Experience the spirit of collaboration with students, academics and activists from universities and partner organizations from different parts of the world.
